Return On Investment: *45%*
Greenhouse gas savings per year: *10 Tonnes*

Hydro Tasmania
the renewable energy business

"Hydro Tasmania has a commitment to be carbon neutral by 2010 & as part of this commitment we have identified areas of savings for our business through the reduction of energy consumption.

As part of reducing energy consumption in our work place we will reduce operational energy costs, reduce green house gas emissions & improve sustainability of our operations.

To achieve this we look at various options available to us and prioritised those that have good payback period which of course reflects the cost & quality of products chosen.

Performance of products & warranty is important to us as an organisation as is knowing that the supplier will be there into the future & are backing the products.

Customer service is again important & it has been for these reasons we have chosen to use ecoBright's Save it Easy in line T5 retrofit devices in a number of areas within our Head Office & are continuing to look at other opportunities where we can apply this technology.

I would also like to add that it has been a pleasure to deal with the staff of ecoBright as their assistance in looking at areas of opportunity is not only good for ecoBright but for us as the customer & we look forward to our on going relations".
